sub Il con't in which  $X_1^1 \dots X_n$  represents a sequence 3-4 of amino acids, wherein the amino acid sequence  $X_1 \dots X_n$  is selected from the group consisting of the amino acid sequences VGG, VLSG, ATG, VSG, DSG, VVSG, ALAG,

984 1250

APSG and VGR, and

(b) a nucleotide sequence which codes for an amino acid sequence with an equivalent recognition specificity, as achieved with a T cell receptor comprising a CDR3 region with the amino acid sequence of SEQ ID NO. 23, for the peptide component of the T cell receptor ligands;

wherein the CDR3 region is at least 90% identical with the amino sequence of

(a).

Acid sequence X<sub>1</sub> . . . X<sub>n</sub> is selected from the group consisting of amino acid sequences VGG, VLSG and ATG.

43

 (Twice Amended) An isolated cell wherein it expresses a nucleic acid as claimed in claim 2 or 4.

Sub #5

26. (Twice Amended) Pharmaceutical composition which contains as an active component a nucleic acid as claimed in one of the claims 2 or 4, or a cell as claimed in claim 6 or 7 optionally together with other active components as well as common pharmaceutical auxiliary agents, additives or carrier substances.
